BREAST AUGMENTATION NO CUT PECTORAL TECHNIQUE

Dr. H. A. Khawaja - Specialist Plastic Surgeon

You can now have scarless surgical and non-surgical breast lift via Khawaja's special breast lift techniques. You can avoid the long and un-aesthetic scars of conventional breast lift. You can have saline & silicone breast implants via pin point and minor scars via Khawaja's exclusive & special breast augmentation techniques. Implants are placed behind the breast gland and behind the muscle via Khawaja's techniques. When implants are placed behind the muscle, you can now save your muscle and have your breast implants behind your muscle at the same time via using Khawaja's No Cut Pectoral Technique for placing the implants behind the pectoral muscles. Khawaja's scarless breast reduction, lift and Khawaja's BAMBI provide excellent scarless alternatives to conventional techniques.
